

Amazing Facts About Water

DISCOVERING OUR AWESOME GOD - Through the Masterpiece of His Creation!

Some Amazing Facts About Water!

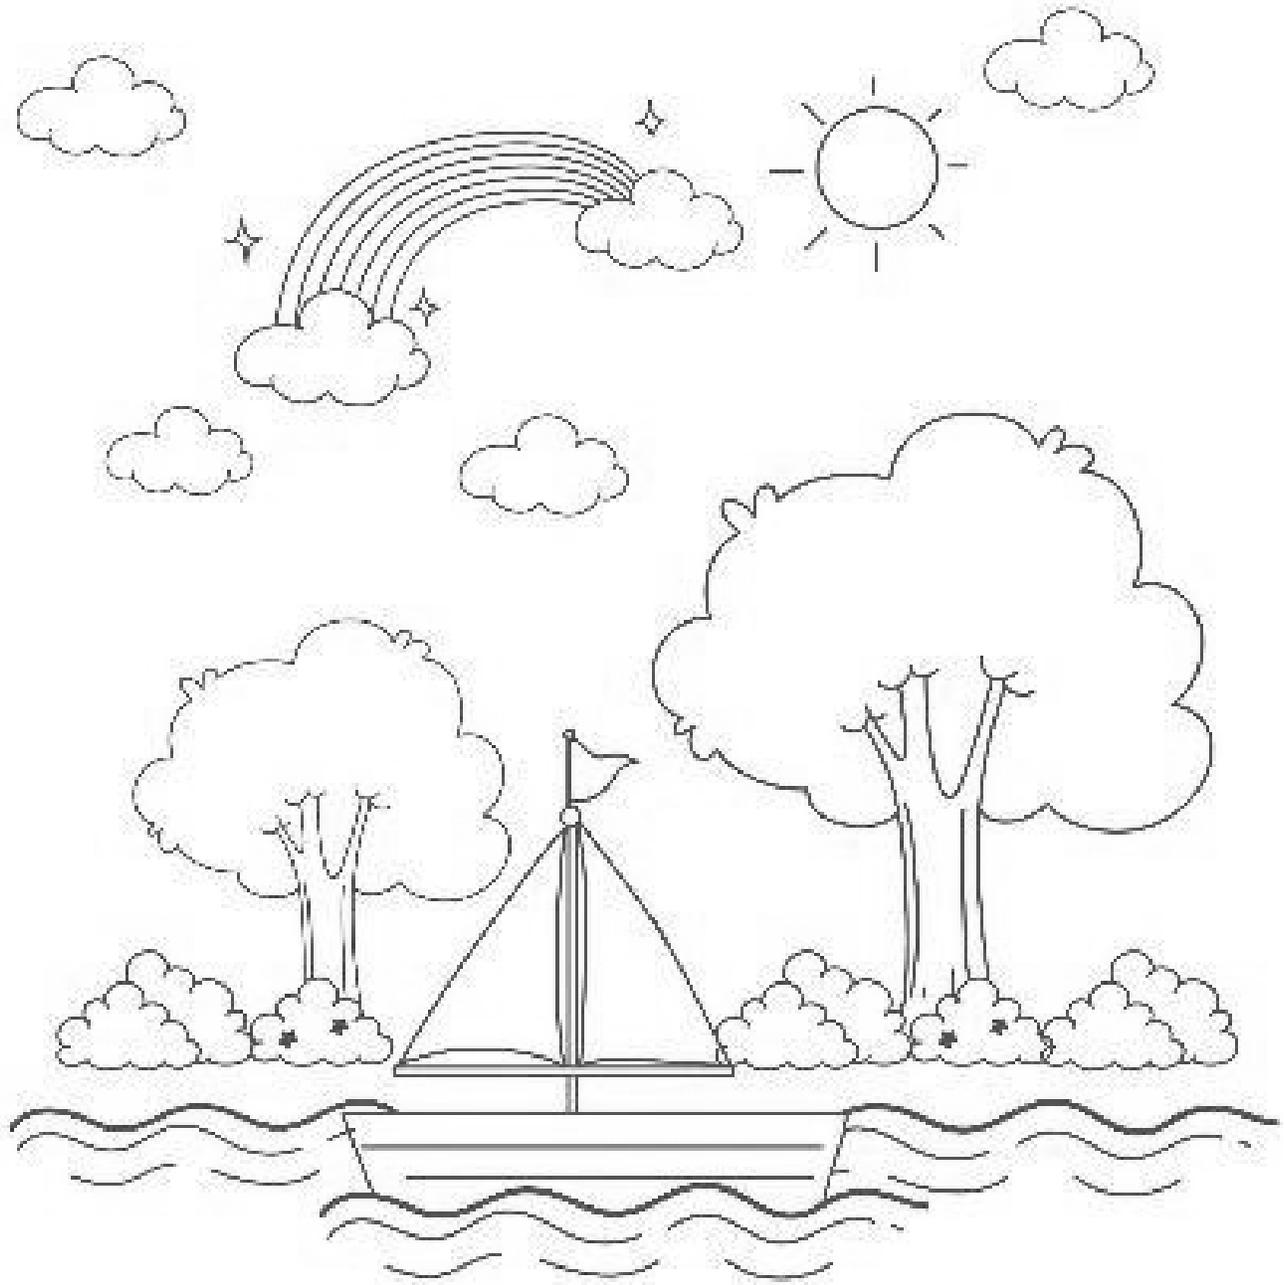

- Because our Earth's temperature is not too hot, or not too cold, water is able to be in liquid form.
- Liquid water allows for oceans, rivers, and lakes to flow freely and to support life.
- The Earth's surface is covered with more than 70% water. Our bodies are made of 60% water.
- Liquid water on Earth helps to keep our air temperatures from being not too hot, or not too cold.
- When liquid water gets too hot, it evaporates by turning into steam. The steam helps take away the heat.
- When our bodies get hot, we sweat. The water from the sweat helps to keep our bodies cool.
- In freezing temperatures, water turns to ice. Ice is less dense than liquid water which allows it to float on top of the liquid water. This allows ice to float to the top of lakes which creates a protective lid so that creatures can survive in the liquid water below.
- Water is super important for life and that is why we need to drink water every day.
